

CONSTRUCTION ADVISORY

NUMBER: 5	Existing Above Ground Electrical Materials	08/18/2011
CATEGORY: Electrical/ITS		

This Construction Advisory serves to restate a requirement of Subpart 701.03.01 of the 2007 Standard Specifications. The specification states that "If modifying existing systems, salvage the existing above ground materials for use in the modified system, or for alternate use, as specified by the Department."

This statement requires the Contractor to salvage all existing above ground electrical materials and if specified by the Department, use those materials in the modified system. The Plans and or Specifications will indicate where existing salvaged electrical materials are to be used.

If existing salvaged electrical materials are not indicated to be used in a modified or new system, the Contractor must provide new materials. Subsection 106.01 of the 2007 Standard Specifications also specifies this requirement.
