1. One of three grab samples which were composited into a single sample. This single grab sample was analyzed for TCL-VOCs to avoid the loss of any volatile organic compounds when compositing samples.
2. Composite of three grab samples.
3. Sample referred as I4297-1 or I4797-1
4. Sample referred as I4297-2 or I4797-2
5. Sample referred as I4297-3 or I4797-3
6. First and seventh leachates generated.
7. Of the five SDM samples that remain to be collected, two SDM samples will be subjected to seven MMEP extractions. All leachates generated from these two samples will be analyzed for TCL-VOCs, TCL-SVOCs, TCL-Pesticides, TCL-PCBs, TAL-Metals, & TOC, while the first and last leachates will be analyzed for Dioxins/Furans, pH, Salinity, Electrical Conductivity, Sulfates, Chlorides, Sulfides, Resistivity & Acidity. The remaining SDM samples will be subjected to a single leachate extraction each. The three single leachates generated will be analyzed for all parameters.
7. K6185-1 is the split sample of sample K-4942 on which the dioxins analysis was performed.
8. The data gathered from this sample has not been presented in the Progress Report.
9. Anticipated number of samples
